

Landrover

Short Wheel base series 1 Landrover. First designed in 1948. This model believed to be 1949 features an overhead / side valve 4 cylinder engine. The engine was known as P3 model. Landrovers were extensively used throughout Australia in the early post war days as one of the few forms of 4WD transport available at that time. They featured an all-aluminium body which reduced their centre of gravity making them safer on steep inclines.
